Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Variance 140.762; scale 0.235

Mean 33.108;

This potassium channel sequence is encoded by the DmORFI gene from Drosophila melanogaster, and has 2 pore-forming domains between 4 hydrophobic transmembrane helix domains. Each pore-forming H5 domains with a VF-G dispettide motif required for potassium septectivity. The protein contains a single N-terminal
                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DMORFI potassium channel protein.

DMORFI; potassium channel; fruitfly; pore-forming domain, transmembrane helix; N-glycosylation site; potassium-agonist; potassium-antagonist; drug screening; insecticide; cafdiac disorder.
              colon cancer metastasis
Claim 8; Fig 4; 60pp; English.
Novel polypeptides (W06545-53) are encoded by cDNA clones (see also
Novel polypeptides (W06545-53) are encoded by cDNA clones (see also
designated CSG1, CSG2, etc., that are primarily expressed in
tissues derived from the colon. Recombinant CSG polypeptides can
be produced in transformed host cells. They are useful diagnostic
markers for colon cancer and for colon cancer metastasis and can
also be used to screen for (ant)agonist cpds. of therapeutic or
diagnostic value. Antibodies raised against the colon specific
                                                                                                                                                                                                                                                                                                                                         Gaps
  which, in non-colon tissue samples, can be used as indication of
                                                                                                                                                                                                                                                                                                                                                                              MSPVKNNVGRGLNIALVNGTTGAVLGQKAFDMYSGDVMHLVKFLKEIPGGALVLVASYDD

W46876-80 and W4682-85 represent proteins encoded by colon-specific genes. The polynucleotides encoding these proteins can be used as probes to detect expression of the corresponding human genes, e.g. in diagnostic assays for detecting micrometastases of colon cancer. Recombinant cells containing the polynucleotides can be used to produce the proteins, in order that antibodies can be raised and sequence 135 AA;

Claim 3; Columns 47-52; 46pp; English.

The present sequence is that of a human mitochondrial isoleucyl-tRNA synthetase. The cDNA encoding for the mitochondrial isoleucyl-tRNA synthetase was isolated from a human T-cell cDNA library. The cDNA can be expressed using expression vectors to produce the corresponding recombinant protein. The protein can be used in assays to test substances known to inhibit the isoleucyl-tRNA synthetase or other tRNA synthetase or pathogenic organisms. Also, expression of the isoleucyl-tRNA synthetase in a tester strain can be useful for testing substances which are capable of inhibiting its activity.
                                                                                                                                                                                                                                                                                     97 FFAFTVCSTVGYGNISPIT-FAGRMIMIAY-SVIGIPVNGILFAGL-GEYFG-RTFEAIY 152

       The protein is predicted to
asparagine-linked glycosylation site. The protein is predicted to span the membrane 4 times, with N- and C-termini within the cell, and the glycosylation site and H2 domains on the cell exterior, allowing permeation of the membrane by the potre-forming domains from the outside, a requirement for functional potassium channel formation. The protein may be expressed in a heterologous host cell to assay substances to determine effects on cell growth. Potassium-agonists or determine effects on cell growth.
                                                                                                                                                                                                                                                        ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This polypeptide comprises gentian flavonoid 3' hydroxylase (F3'H). Its amino acid sequence was deduced from a cDNA clone (see T94664) isolated from a petal cDNA library. F3'H acts on dihydrokaempferol to produce dihydroquercetin and on naringenin to produce eriodictyol. Isolated F3'H nucleic acids (see T94655-65) can be used to provide genetic constructs capable of modulating the hydroxylation of flavonoid compounds in a plant, e.g. by de novo expression, over-expression, antisense inhibition and ribozyme activity. Modulation of F3'H is useful for the manipulation of pigmentation (flavonoids contribute to a range of colours from yellow to red to blue) in plants, especially flowering plants such as petunia, carnation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chrysanthemum, rose, snapdragon, tobacco, cornflower, pelargonium, lisianthus, gerbera, apple, iris, lily, african violet and morning

This protein comprises a novel human nuclear protein, designated
This protein comprises a novel human nuclear protein, designated
This protein comprises a novel human nuclear protein, designated
The (highly expressed in cancer), that appears to be crucial for
normal mitosis. Its amino acid sequence was deduced from an
isolated B cell cDNA clone (see V38564). HEC localises to the
nuclei of interphase cells and redistributes to centromeres during
M phase. Ectopic expression of a mutant HEC containing only the
leucline heptad repeats results in cells being unable to divide more
than once. Inactivation of HEC results in disordered sister
chromatid alignment and separation, and formation of non-viable
cells with multiple, fragment micronuclei. HEC interacts through
its leucine heptad regions with several proteins involved in
itsels, including nek2, sbi.8 and 2 different regulatory subunits
of the 26s proteasome, MSSI and p45. These properties suggest
cattachment to kinetochores, sister chromatic movement, and M phase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; V38564.

Muclelca acid encoding human nuclear protein HEC modulating mitosis useful to, e.g control cell malignancies and other cell growth abnormalities at mitosis stage and to produce HEC protein and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         abnormalities at the cell mitosis stage. HEC peptides are useful in vaccines and may be administered to cells to disrupt chromatid separation and so medulate cell cycle progression (claimed). HEC specific antibodies are useful in purifying native or recombinant HEC and to detect HEC protein/peptides in samples (claimed immunodetection kits are provided). They can also be administered to disorder slater chromatid alignment and separation in an interphase cell, so disrupting mitosis (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                progression to name of the compositions to control cell malignancies and other cell growth abnormalities at the cell mitosis stage. New nucleic acid encoding human highly expressed in cancer nuclear protein - used for diagnosis and for modulation of the cell cycle to control malignant and other cell growth abnormalities

Claim 2; Pages 58-61; 75pp; English.

This is the amino acid sequence of a human nuclear protein (HEC) used in the method of the invention to diagnose cell growth abnormalities.

Fragments of HEC are used to detect HEC-encoding nucleic acid, in conventional immunoassays to detect HEC-encoding nucleic acid, in andlate cell cycle progression (by disrupting chromatid separation) and antibodies are used to discrete HEC or peptides. HEC is used to an antibodies are used to discrete acid chromatid alignment and separation in interphase cells, disrupting mitosis, particularly for control of malignancy and other cell growth abnormalities at the mitosis stage. Antibodies can also be used for protein purification, isolate sequences encoding HEC or related proteins; to study HEC distribution in cells and to isolate antigens by immunoprecipitation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
16-FEB-1999 (first entry)
Anino acid sequence of the human nuclear protein.
Human nuclear protein; HEC; cell growth abnormality; hybridisation; amplification; antibody; immunoassay; malignancy; mitosis; antigen; immunoprecipitation; immunisation; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     selected from haemin-binding protein, haemolysin, LppB and LppC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Haemin-binding protein produced as fusion protein in pGCH5. Haemophilus somnus; immunogenic; haemolysin; LppB; LppC; thromboembolic meningoencephalitis; septicaemia; arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Fig 5; 119pp; English.

The hmb gene encoding the haemin-binding protein was expressed in the hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene likth coded for by plasmid pha552. The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORT. The haemin binding protein can be used in vaccines for preventing or treating H. Sommus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
                          E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkta coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. Somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             102 KNLPQGAFDAFVSITFNVGCGKM-QKS-TLFKQANQGFTPQLCHQFERWIYAGGKKLNG 158

Claim 1; Fig 2: 119pp; English.
A genomic cosmid library of Haemophilus somnus HS25 DNA was screened for clones capable of binding bovine haemin and having haemolytic activity. Positive clones were subcloned various times, resulting in plasmid pRAPPOI, which binds haemin but is not haemolytic. The clone was sequenced and was found to contain several open reading frames, potentially encoding 8 proteins. The haemin binding protein (encoded by the hmb gene) was encoded by ORPI. The protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             104 KNLPQGAFDAFVSITFNVGCGKM-QKS-TLFKQANQGFTPQLCHQFERWIYAGGKKLNG 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; Page 11; 24pp; English.

Replacing Glu at position 126 of bovine somatotropin reduces hydrophobicity and helical stability in the region of the mutation. The analogue-bsr has a lower propensity of the partially denatured protein for aggregation and precipitation during processing. It also has enhanced bloactivity and can be used for enhancing the growth of an animal, e.g. beef cattle or increasing milk production in dairy cows. The mutation was introduced by standard site-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   residues 96 to 133 to reduce hydrophobicity or helical stability

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 2; Page 17: 24pp; English.
Replacing Lys at position 114 of bovine somatotropin reduces
hydrophobicity and helical stability in the region of the mutation.
The analogue-bST has a lower propensity of the partially denatured
protein for aggregation and precipitation during processing. It
also has enhanced bloactivity and can be used for enhancing the
growth of an animal, e.g.beef cattle or increasing milk production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Animal somatotropin analogues – have aminoacid changes at residues 96 to 133 to reduce hydrophobicity or helical stability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Phe, Tyr, Trp, Thr, Gly,

Example 5: Page -: 28pp; English.

This sequence represents a variant of bovine growth hormone which alters the mature protein amino acid sequence represented in W37691. This variant is used in a method to detect growth hormone antagonists. Such disorders characterised by excessive or undesirable growth hormone activity, especially diabetic retinopathy, glomerulosclerosis or growth hormone-dependent tumours, and for lowering serum cholesterol levels. Note: This sequence does not appear in the specification but has been constructed from the sequence represented in Figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "Wild type Lys is replaced by Trp. Numbering is given from the start of the mature peptide."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 119 LSRVFTNSLVFGTSDRVY-EKLWDLEEG-ILALMRELEDGTPRAGQILKQTYDKFDTNMR 176

Title: Perfect score: Sequence:

IDENTITY_NUC Gaport 1.0 Scoring table:

623170 Total number of hits satisfying chosen parameters:

311585 seqs, 125096042 residues

Searched:

Minimum DB seq length: 0 Maximum DB seq length: 1000000

Post-processing: Minimum Match 0% Listing first 45 summaries

N_Geneseq_36:* Database : Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 1; page 92; Il6pp; English.
Sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, proprosticating, preventing, or gastrointestinal tract, such as gastrointestinal tract cancers. Barret's esophagus, gastric ulcer, gastrointestinal tract cancers, Edin's disease, ulcerative colitis, pantreatits, leiomyoma, polyps, Grohn's disease, ulcerative colitis, pantreatitis, leiomyoma, polyps, Grohn's disease, ulcerative colitis, pantreatitis, 197 T;

Claim 1; Fig 4; 60pp; English.
13 cDNA clones (745880-92), most of them partial clones, correspond
to human colon specific genes, designated CSG1, CSG2, etc., that
are primarily expressed in tissues derived from the colon. CSG7
and CSG10 show reduced expression in colon cancer cells as compared
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to that in normal cells, the remaining genes are overexpressed in colon cancer. The partial CDNA sequences can be used to isolate full-length clones and genomic clones including the complete gene. CSG nucleic acids can be used to produce CSG polypeptides (see also w06545-53) in transformed host cells, as probes to detect disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ccagagctgctggagatggagggctgcatgccccgaagccattttagggtggctgtggc

           Cident 1: regressent a set of contiguous and partially overlapping Engequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastriitis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.

V63504-15 represent a set of contiguous and partially overlapping E sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract, cancers,

V63504-15 represent a set of contiguous and partially overlapping ES sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disorders. The methods and products can be used in detecting, determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastriits, lelomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.

The sequences are isolated from a CDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting,

Claim 1, Page 90; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EX sequences designated CS141. The sequences are isolated from a CDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcar, astrictis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.

The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disponders. The methods and products can be used in detecting, disponding, staging, monitoring, proponosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, barrointestinal tract, such as gastrointestinal tract cancers, crohn's disease, ulcerative colitis, pantreatitis.

V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disonosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastritis, leionyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EST

The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastriatis, leiomyoma, polyps, crohn's disease, ulcerative collis, pantreatitis, leiomyoma, polyps, crohn's disease, ulcertive collis, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New gastrointestinal tract specific polynucleotides, CS141 - used develop products for the diagnosis and treatment of e.g. cancers, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis or

                                                                                                                                                                                                                               28-JAN-1999 (first entry)
Clone 775133 EST corresponding to CS141 sequence.
EST sequence: CS141; gastrointestinal tract; cancer; Barret's esophagus; gastric ulcer; gastritis; leiomyoma; polyps; Crohn's disease; ulcerative colitis; pantreatitis; ss.
                              182
                                                         182
                                                                   V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, crohn's disease, ulcerative colitis, leiomyoma, polyps, crohn's disease, ulcerative colitis, pantreatitis, leiomyoma, polyps, Sequence 273 BP; 49 A; 81 C; 90 G; 46 T;

       Quble-stranded CDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Tissue samples provided by Dr. Brian Dieckgraefe (Washington University, dieck@im.wustl.edu); colonic mucosa represents a range of ulceration, tibrosis, and degeneration. Library constructed by Bento Soares and M. Fatima Bonaldo. "

with a modified polylinker; 1st strand cDNA was prepared
from normal prostate bulk tissue, and was then primed with
a Not I: -oligo(dI) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified p1773 vector. Library is normalized, and was
constructed by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note--Vector: pT/T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. This library is the normalized version of NUI_CGAP_BRI.1. Library was constructed by Bento Soares and M. Fatima Bonaldo. "

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaido. "

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. Library is not normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo (Soares4).
